Higgins,IIIThis book depicts the many hardships and sacrifices of early American western exploration from Stephen Long and his associates during their 1819-1820 expedition to the Rocky Mountains. Although heavily criticized at the time for not completely fulfilling their expectations, the overall information gathered was considerable. From geography, botany, zoology and geology, to Indian customs and cultures, their individual scientific publications speak for themselves. This is not a book about hostile Indian battles, numerous attacks by grizzlies, etc. which are somewhat expected of journals and narratives of this era. Rather, this is how these men described the various landforms, animals, plants and Native Americans that they encountered while suffering from thirst, hunger, fatigue, fever and climate. It is truly an engrossing book and the writing is very descriptive of how the American west was before westward expansion set in.

This is a pre-1923 historical reproduction that was curated for quality. Quality assurance was conducted on each of these books in an attempt to remove books with imperfections introduced by the digitization process. Though we have made best efforts - the books may have occasional errors that do not impede the reading experience. We believe this work is culturally important and have elected to bring the book back into print as part of our continuing commitment

to the preservation of printed works worldwide.
