Ronald J. Leach : Confessions of a Cruise Lecturer: Large Print Edition before purchasing it in order to gage whether or not it would be worth my time, and all praised Confessions of a Cruise Lecturer: Large Print Edition:

0 of 0 people found the following review helpful. One StarBy Philip TsuiVery little content and lots of fluff.

I have been a cruise lecturer for many years, with my wife and I traveling all over the world at the expense of cruise

lines. Confessions of a Cruise Lecturer is based on my experiences. Here's what you will learn from this book: What cruise lines are looking for Booking agencies and what they expect Passing the test - How to get approved to even be considered as a cruise lecturer How to write a proposal to be a lecturer on a particular cruise How to prepare your lectures What are the special techniques you need to lecture on the unique cruise ship environment What you need to bring with you Interacting with fellow passengers and cruise staff What the cruise lines expect from you How to manage your cruise lecturing career Happy (and free) cruising!

About the Author I recently retired from being a professor of computer science at Howard University for over 25 years, with 9 as a department chair. (I was a math professor for 16 years before that.) While I was department chair, we sent more students to work at Microsoft in the 2004-5 academic year than any other college or university in the United States. We also established a graduate certificate program in computer security, which became the largest certificate program at the university. I had major responsibility for working with technical personnel to keep our departments hundreds of computers functional and virus-free, while providing email service to several hundred users. We had to withstand constant hacker attacks and we learned how to reduce the vulnerability of our computer systems. As a scholar/researcher, I studied complex computer systems and their behavior when attacked or faced with heavy, unexpected loads. I wrote five books on computing, from particular programming languages, to the internal structure of sophisticated operating systems, to the development and efficient creation of highly complex applications. My long-term experience with computers has helped me understand the nature of many of the computer attacks by potential identity thieves and, I hope, be able to explain them and how to defend against them, to a general audience of non-specialists. More than 3,500 people have attended my lectures on identity theft; many others have seen them on closed-circuit television. I have written more than twenty books, and more than 120 technical articles. I was the editor or co-editor of the Maryland Genealogical Society Journal for many years. Books by Ronald J.
