National Geographic Maps - Trails Illustrated : Mount St. Helens, Mount Adams [Gifford Pinchot National Forest] (National Geographic Trails Illustrated Map) before purchasing it in order to gage whether or not it would

be worth my time, and all praised Mount St. Helens, Mount Adams [Gifford Pinchot National Forest] (National Geographic Trails Illustrated Map):

By John Oberdiek
I used this map for some off-trail hiking near Mt. St Helens. There was not nearly enough detail to identify and keep me off of nearly vertical slopes on two occasions. I bought second topo at the local hiking store with the same resolution and was easily able to identify the two areas I had hit while hiking.

The map is well-printed, and the plastic coating is great. It is large as someone else noted, but it folds well and will be easy to stuff into the pack. The big problem with it is that there are no point-to-point distance measurements on any of the trails. I've not hiked this area before; so maybe the trails are pretty straight and you can simply use the general scale to determine distance, but that's not ideal if you're planning to do a long hike and want some assurance that you know what you're getting yourself into before setting out. There is also no general indication of relative trail difficulty (easy, moderate, severe, etc.). Again, you can use the topographical features to see relative elevation changes, but that's not the same as a rating--a level trail over boulders is harder than a 5% incline over hardpack, for example.

This map is a lifesaver if you're driving through areas with very little cell service. Definitely worth the price.

Waterproof Tear-Resistant Topographic Map
Mount St. Helens is an active volcano in Washington's Cascade Range. Neighboring peak Mount Adams is the second highest summit in Washington after Mount Rainier.
